

Scope of Work

PrYSM Website Proposal Package

Project: PrYSM website: Prototype proposal, Database Creation, Specification, and Handoff

Client: Providence Youth Student Movement (PrYSM)

PO Box 6487, Providence, RI 02940 · info@prysm.us · 401-383-7450

Contractor: Josue Bustamante

Date: 27 September 2026

A completed high-fidelity static proposal for the PrYSM site rebuild: public pages, registration, email-and-password login, a gated member events deck (Shift Glass), channel opt-ins, brand rules, accessibility and safety constraints, and a webhook field map for Airtable and/or EveryAction.

Engagement limits. This is a static HTML/CSS/JS prototype. Forms demonstrate empty, error, success, and offline states in the browser. There is no production authentication and no live CRM writes. The engagement proceeds to a production launch after prototype approval and after the production database is deployed.

1. Engagement summary

This engagement delivered a clickable, high-fidelity static proposal for rebuilding the PrYSM public site and member portal. The public site and member portal share a brand; they are not the same product. Reviewers open **proposal.html** and walk the register → login → gated events → channel opt-ins path on a phone-width viewport. Forms show success, error, offline, and webhook payload examples in the browser; they do not write to a live CRM. The written specifications in this package define auth rules, the webhook data contract, accessibility, and safety constraints for a future production build.

2. Audiences (priority order)

1. **New youth (Instagram → Home / Register).** One-handed, impatient, often on cellular. Highest-priority actions: Register, RSVP, Mutual Aid (Contact).
2. **Existing member on a bus.** Already trusted. Needs the next event, a role, and a confirm that will not fire in a pocket. Low spectacle, large targets, works in a tunnel.
3. **Staff entering data zero times.** Name, channels, event, shift, and consent timestamps land in Airtable / EveryAction via webhook. No spreadsheet re-entry.

3. Scope of work

Must ship

- Seamless registration for new members
- Secure login to a member portal (email + password)
- Internal, gated events page for members only

Should ship

- RSVP plus volunteer role sign-up on event listings
- Granular SMS / WhatsApp / Email opt-ins
- Webhooks to Airtable / EveryAction (field map and consent rules in the contractor brief)

Signature behavior

- **Shift Glass** (portal events deck): tap RSVP or Roles, then a centered confirm dialog.
- **Quiet Chamber** (dark login/portal chrome) and **Spectrum Consent** (channel bands) ship with the must-haves; they are not extra decoration.

4. Deliverables

- **Public information architecture** — Home; Us (Story, Community, Networks, Campaigns, RICE, Organizing Circle, Announcements); Tools (Know Your Rights, ICE, PASS, Lao Deportation Toolkit); Contact; Donate (ActBlue); Register; Login. Reviewer can navigate the public site structure.
- **register.html** — Three-step registration wizard with Spectrum Consent. Reviewer can walk empty, error, success, and offline states via query flags.
- **login.html** — Quiet Chamber, email + password only. Reviewer can test gate redirect and error/offline banners.
- **portal-events.html** — Gated Shift Glass events deck (noindex). Reviewer can RSVP/role with centered confirm, or open logged-out gate returning to login with `next`.
- **portal-comms.html** — Channel opt-ins (SMS / WhatsApp / Email). Reviewer can toggle spectrum bands and see saved + payload states.
- **brand.html** — Live brand board for tokens, glass depths, and motion. Reviewer can inspect visual rules against the site.
- **proposal.html** — Hub linking screens, state flags, and written specs for one-handed review.
- **Written specifications (delivered with this package):**
 - **Scope ladder** (shared/scope-ladder.md): audiences, must/should ship, information architecture, and safety.
 - **Contractor brief** (shared/contractor-brief.md): auth, webhook field map, form-state matrix, accessibility, out of scope.
 - **Brand physics** (shared/brand-physics.md; also **PrYSM-Brand-Physics.pdf** appendix): spectrum tokens, glass depths, type, and motion.

5. Specification summary

Condensed from the contractor brief. Prototype forms demonstrate states in the browser; Production authentication and live CRM writes to be implemented.

Auth rules

- Email + password is the only login method in this proposal.
- Unauthenticated `/portal/*` redirects to login with a `next` return URL.
- Portal routes are `noindex`, `nofollow` and must not appear in the public sitemap.
- Production session model specified: `httpOnly` cookies (not implemented live here).

Webhook field map (data contract)

POST JSON to Airtable and/or EveryAction. One event per successful form. Include consent_at (ISO-8601). Production database to be deployed.

Field	Type	Sources
form_type	string	register, rsvp, mutual-aid, event_rsvp, shift_signup, comms, newsletter, contact, login-password
name	string	register, rsvp, mutual aid, newsletter, contact
email	string	register, login, newsletter, contact
phone	string null	register
contact	string null	mutual aid
need	string	mutual aid (staff-only)
channel_sms	boolean	register, comms
channel_whatsapp	boolean	register, comms
channel_email	boolean	register, comms
consent_at	datetime	all opt-in writes
event_id	string null	rsvp, event_rsvp, shift_signup
shift_id	string null	shift_signup
next	string null	login return URL
source	string	page filename

Never send event street addresses or member names in public analytics. Mutual aid need is staff-only.

Form / auth state matrix

Surface	Empty	Error	Success	Offline
Register	Step 1 blanks	Name/email required	“You’re in” + payload	Banner; queue locally in production
Login password	Email / password blank	Email + password required	Navigate to events	Banner
Events RSVP / role	—	Full role not selectable	Centered confirm, then payload	Cached next event copy
Comms	Bands on	—	Saved + payload	Banner

Mutual aid and public RSVP are collected on Contact and gated Events, not a link-in-bio page. State flags: ?state=error · ?state=success · ?state=offline · ?auth=out.

Accessibility

- Focus rings: 3px cobalt (white on dark hero/CTA).
- Shift Glass: RSVP / Role buttons are the only path. Confirm dialog is keyboard-operable (Escape, Cancel, Confirm).
- Shift capacity: light density and the words Open / Filling / Full. Never color only.
- Tap targets $\geq 48\text{px}$ (- - thumb: 3rem) on portal tools.
- Bilingual Khmer / Lao / English UI is out of scope for this engagement.
- KYR pages: high contrast, no motion spectacle.

Safety

- Know Your Rights, ICE, and deportation toolkit pages: high contrast, no decorative 3D.

- Gated event titles may be public-safe (“Community night”); addresses, member names, and shift sites never appear in OG tags, sitemaps, or Instagram shelves.
- Social stills are staff-approved and delayed. No live Instagram scrape.
- Color is never the only capacity signal on roles.

6. Acceptance

A reviewer can walk **proposal.html** at 390px width, one-handed, without a meeting. If a screen does not help one of the three audiences act in under 15 seconds, it is out of this proposal.

7. Commercial close

Labor is billed at **\$150.00 per hour** across engineering, database construction (specified data contract — not a deployed database), onboarding, and support. Materials are billed separately. **Amount due: \$5,000.00** on the accompanying invoice (INV-2026-0927). Line-item detail appears only on that invoice.
